

NEERAJ ALLAM

(913) 963-5892 | neerajreddy14@gmail.com

EDUCATION

University of Central Missouri, *master's in computer science*

(May 2023) Warrensburg, MO

- Advanced Algorithms, Advanced Operating Systems, Database Design, Adv Application Programming in Java, Introduction to Cloud Computing, Big Data: (Storage, Anlytc&Visl), Advanced Database Systems, Machine Learning, Compiler Design & Construction, Stat Found Data Science & AI

ICFAI UNIVERSITY of Science & Technology, *Bachelor of Technology*,

(JULY 2021) Hyderabad, India

TECHNICAL SKILLS

Programming Languages	:	Java, JavaScript, TypeScript, Python, SQL, HTML5, CSS3, XML, Shell Scripting
Frameworks/Libraries	:	Angular, RxJS, Web Services, jQuery, J2EE, Bootstrap, Spring Boot, Spring Framework, Spring MVC, Spring Security, Hibernate, Microservices
Workflow Tools	:	Visual Studio Code, Sublime Text, Eclipse, IntelliJ IDEA, Oracle SQL Developer, Microsoft Visio, Spring Tool Suite, Offset Explorer, FileZilla
Source Code Management	:	Git, GitHub, Bitbucket, JFrog Artifactory
SDLC Methodologies	:	Waterfall, Agile Scrum, Agile Methodology

ACADEMIC PROJECTS

[Attendance Reminder](#) | Java, Visual Studio, MS SQL, HTML, CSS, Angular, Android Studio. January 2020

- Developed an android application which helps us to remind the timetable, assignments to submit, notifications for students and attendance reminder which helps students to maintain attendance in courses.

[Collab Meet](#) | Java MVC, XML, JSON, TypeScript, Angular5, Node.js, Firebase, RxJS November 2022

- Designed and developed a feature-rich video conferencing tool, empowering users to create virtual rooms and fostering seamless collaboration among multiple participants. Implemented essential functionalities, enabling users to conveniently toggle video and audio streams while facilitating effortless screen and file sharing during video conferences. Successfully hosted the web application on Firebase, ensuring a smooth and reliable user experience.

PROFESSIONAL EXPERIENCE

InfoWay Solutions | Software Engineer

November 2023 – till day

- Proficient in Java programming, with expertise in design patterns, object-oriented principles, and the development of scalable, high-performance applications.
- Developed and maintained the International Enterprise Inventory application using Java and Spring Boot, improving inventory management processes and scalability for global operations.
- Designed and optimized RESTful web services using Java and Spring Boot, increasing data transfer efficiency by 20% through optimized JSON-based transmission.
- Proficient in API design, development, and integration using Spring Framework, improving system-to-system communication by 35%.
- Deployed and managed components on Kubernetes, leveraging Docker for microservice-based application deployment, improving scalability, reliability, and resource efficiency by 15%.
- Pioneered deployment of components on Walmart Cloud Native Platform (WCNP), showcasing expertise in Kubernetes dashboard and Slack integration, increasing deployment efficiency by 20%.
- Upgraded infrastructure from CentOS to Ubuntu 21.01 on OneOps cloud, improving OS performance and security by 25%.
- Implemented and optimized Kafka event-driven architecture for real-time data streaming, ensuring robust and fault-tolerant data processing.
- Utilized Offset Explorer to analyze Kafka data flow and component status, optimizing data processing time by 15% and improving data tracking and reliability.
- Created SQL-based data quality scripts to validate data loads, ensuring 99% data accuracy.
- Configured JFrog Artifactory to optimize artifact management, improving version control and deployment speed while reducing storage costs.
- Integrated and customized Slack channels, automating workflows through custom Slack bots, improving operational efficiency by 15% and optimizing team collaboration.
- Configured and administered cloud infrastructure, actively managing fault tolerance, reducing downtime by 25%, and improving overall cloud reliability.

- Implemented automated test scenarios using Cucumber framework with Astra, enhancing data validation, and utilized Jenkins for test automation, increasing testing efficiency by 20%.
- Worked extensively with Cassandra as a primary database and Cosmos DB in other components, optimizing database interactions and improving data retrieval performance.
- Managed production issue resolution using Agile methodology, reducing critical issue resolution time by 30%.
- Facilitated collaboration with cross-functional teams, fostering communication between developers, product managers, and stakeholders, leading to a 20% improvement in project efficiency and streamlined workflows.
- Utilized Jira for project tracking, sprint planning, and reporting, ensuring effective issue tracking and agile development.
- Managed Git repositories using GitHub, ensuring code quality through pull requests, branching strategies, and thorough code reviews.
- Automated operations using PowerShell, coordinating complex processes, log collection, and validation workflows.
- Configured and maintained FileZilla to facilitate efficient file synchronization and cross-platform data transfers.

Environment: Slack, Slack Bot, PowerShell, Custom Apps, Lenses, WCNP, OneOps, Agile Methodology, Offset Explorer, FileZilla, REST API, Hibernate, Spring Framework, Spring MVC, Spring IOC, Spring Boot, Spring Security, Microservices, Apache Kafka, Git, GitHub, Maven, JIRA, Spring Tool Suite, Kubernetes, Docker, Cassandra, Cosmos DB, JFrog Artifactory, Jenkins, Cucumber Framework, Astra, SQL, JSON.

Broad Peaks | Software Engineer

May 2023 – October 2023

- Developed a robust Airlines Crew Management System using Java and the Spring framework, enhancing operational workflows and increasing efficiency by 30%.
- Designed and delivered highly responsive user interfaces using HTML, CSS, and Bootstrap, improving user engagement by 25% and ensuring consistent cross-device experiences.
- Optimized data access by leveraging Hibernate and JDBC, boosting SQL query performance and data processing speed by 20%.
- Integrated Apache Kafka to enable real-time data streaming, enhancing data analysis processes by 35% and establishing scalable, fault-tolerant data pipelines.
- Developed and consumed RESTful APIs, improving system-to-system communication and ensuring efficient data exchanges.
- Executed client-side scripting with 96% accuracy, focusing on API-level interactions, utilizing Postman and Java Spring Boot to send requests, analyze responses, and troubleshoot API issues.
- Designed a microservices-based architecture, enabling seamless deployment on AWS, improving deployment flexibility by 40% and enhancing system scalability.
- Provisioned and managed Amazon EC2 instances, deploying applications on a highly reliable and scalable cloud infrastructure, increasing system uptime by 35%.
- Deployed static and dynamic applications using AWS services like Elastic Beanstalk and Elastic Container Service (ECS) with Docker, accelerating deployment speed by 30% and improving reliability.
- Established a CI/CD pipeline using Docker, Jenkins, and GitHub, streamlining software delivery, improving release speed by 50%, and maintaining 95% uptime through rapid issue resolution.
- Collaborated within a 7-member Agile development team, contributing to key feature implementation, improving team productivity by 25%, and ensuring timely project delivery through effective coordination, task delegation, and sprint reviews.
- Conducted code reviews, providing constructive feedback to enhance code quality and maintainability.
- Involved in various SDLC phases, including Requirement Gathering, Design, Analysis, and Development, ensuring smooth project execution.
- Implemented Spring Boot microservices for modular and scalable application development, improving deployment efficiency and maintainability.
- Utilized Spring MVC, Spring Security, and Hibernate to develop secure, high-performing backend systems.
- Configured Kafka producers and consumers, monitoring real-time data streaming and network element performance, reducing data latency by 25%.
- Gained hands-on experience with Kafka's distributed publish-subscribe messaging system, improving data reliability and scalability.
- Worked extensively with SOAP and RESTful APIs, showcasing expertise in building, integrating, and optimizing web services for efficient data communication.

Environment: Agile Methodology, JDK 1.8, J2EE, HTML5, CSS3, JavaScript, TypeScript, jQuery, AJAX, Bootstrap, Express.js, Node.js, REST API, GraphQL, Hibernate, Spring Framework, Spring MVC, Spring IOC, Spring Boot, Spring Security, Microservices, OAuth, Apache Kafka, AWS (EC2, S3, RDS, Lambda, Elastic Beanstalk, ECS), GIT, JUnit, Mockito, Maven, WebSphere, Docker, Kubernetes, Jenkins, CI/CD Pipelines, JIRA, Confluence, Spring Tool Suite.

Vitosha | Software Engineer

January 2023 -April 2023

- Developed the Business Management System using Java and the Spring framework to efficiently manage Staff members. This involved implementing business logic using Object-Oriented Programming (OOP) principles.
- Translated conceptual designs into interactive user interfaces using technologies such as HTML5, CSS3, and Bootstrap. Debugged Java and JavaScript code using popular IDEs like IntelliJ IDEA or Eclipse.
- Created business tools using the Spring framework, including Spring Boot, to enhance organizational value.
- Worked on the Data Access Layer by utilizing Hibernate and JDBC to connect, retrieve, and update data from a SQL database. Optimized query performance by fine-tuning SQL queries and database schema.
- Assisted customers in application development using Java, including Spring, and implemented RESTful APIs using technologies like Spring Boot and Hibernate.
- Proficient in Software Design Patterns and experienced with Dependency Injection frameworks like Spring IoC.

- Extensively worked on connecting applications to databases using Hibernate, JPA, and Java 8 Lambda Expressions.
- Demonstrated the ability to quickly address software errors and service issues, ensuring minimal downtime.
- Skilled problem solver with a history of resolving issues during project handover.
- Proficiency with AWS services like EC2 and RDS, as well as NPM for automated scheduling and package management.
- Designed, implemented, and supported fully automated Continuous Integration and Continuous Delivery (CI/CD) processes using AWS DevOps.

Dishaam Solutions, India | web developer

March 2021 – May 2021

- Collaborating with the team to create and customize WordPress plugins according to project requirements. This includes me understanding client needs, implementing functionality, and ensuring compatibility and scalability. Assisting in maintenance and updates of existing website and web applications
- Assisted in testing and quality assurance processes to ensure that developed websites and applications meet functional and performance requirements and contributed to documentation including writing code documentation, creating user guides, and providing progress reports to team leads or project managers.

SHC Technologies, India | Mean Stack Developer

August 2020 – January 2021

- Played key role in the 11-member team in developing the social app enables to interact with people through online, my job was to do application program interfaces and integrate them to real time projects and I have worked on application program interfaces like creating a meeting room, sending mails from node mailer about the meeting, worked on video call application, worked on node modules.
- actively contributed to User Interface Design/Development, Merchant Integration and Market Research using Microsoft Excel, Python and R language for statistical computing and graphics

Dev App Solutions, India | IOT web application developer

May 2019 – August 2019

- Developed frontend and backend application to monitor the soil health from sensors and make users understand data in detailed structure. The project was named smart farming, and my role was to work on website development, Lora technology and data research.
- Collaborated with domain experts to define and implement complex business logic within the Smart Farming website, ensuring accurate calculations and insightful data analysis related to soil health parameters and Implemented data caching techniques using Java to optimize performance and reduce database queries, resulting in faster response times for data retrieval and improved overall user experience.
- Integrated data visualization libraries, such as charting and graphing tools, within the spring framework, enabling users to easily interpret and visualize soil health data trends and patterns and Implemented user authentication and role-based access control mechanisms using spring framework , ensuring secure access to different features and data based on user roles and permissions.
